PROFESSIONAL SUMMARY

Computer Engineer and Senior Full Stack Developer with **8+ years of experience** building web applications, SaaS platforms, internal systems, and digital products in production.

Solid experience with **React.js, Vue.js, JavaScript, TypeScript, Python, Django, Django REST Framework, Node.js, and PostgreSQL**, working on both frontend and backend and taking part in the full development cycle: functional analysis, technical design, implementation, testing, debugging, performance optimization, and ongoing maintenance.

Experience working with **multiple frontend frameworks**, REST APIs, authentication and authorization, asynchronous processing, third-party service integrations, SQL/NoSQL databases, Docker, and AWS.

I currently work with an **AI-assisted / AI-first** approach, using **Claude Code and GitHub Copilot** on a daily basis for technical analysis, implementation, debugging, refactoring, test generation and review, documentation, and code review. I also have experience with **OpenCode, OpenAI Codex, and Gemini**, applying technical judgment to review, validate, and correct generated solutions before they reach the product.

I am currently involved in designing and building a **RAG (Retrieval-Augmented Generation) architecture** from scratch, integrated with a conversational interface, combining vector search, *embeddings*, context retrieval, and LLM-based answer generation, with a **Python and FastAPI** backend.

I also have hands-on experience integrating **LLMs through the OpenAI API**, working with prompt engineering, structured response validation, error handling, automation, and testing.

Experience in **banking/fintech, SaaS, travel, mobile, Chrome extensions, chatbots, and process automation** products, with a focus on autonomy, code quality, maintainability, and product.

TECHNICAL SKILLS

Frontend	React.js, Vue.js, React Native, JavaScript, TypeScript, HTML5, CSS3, HTMX, Tailwind, Bootstrap
Backend	Python, Django, Django REST Framework, FastAPI, Node.js, Express.js, REST APIs
AI-Assisted Development	Claude Code, GitHub Copilot, OpenCode, OpenAI Codex, Gemini, AI-assisted coding, code review, debugging, refactoring, test generation
AI / LLM Integrations	RAG (Retrieval-Augmented Generation), vector search, embeddings, OpenAI API, Generative AI, Prompt Engineering, structured outputs, Pydantic validation, automation workflows
Databases	PostgreSQL, MongoDB, MySQL, Redis
Architecture / Backend	REST APIs, authentication, authorization, permissions, asynchronous processing, webhooks, business logic
Testing / Quality	Unit Testing, Integration Testing, End-to-End Testing, debugging, refactoring, performance optimization
Infrastructure / DevOps	Docker, Linux, Git, GitHub, AWS, Gunicorn, Nginx
Integrations	Stripe, WhatsApp Business API, OpenAI API, Celery, Redis

AI-first workflow: daily use of **Claude Code and GitHub Copilot** to build, review, validate, and correct AI-assisted code as part of the regular development cycle.

PROFESSIONAL EXPERIENCE

Cooperativa de Trabajo Devecoop Ltda. — Partner / Full Stack Developer

Feb 2018 – Present | Buenos Aires, Argentina

- Development and maintenance of web applications and digital products using **Python, Django, Django REST Framework, JavaScript, TypeScript, Vue.js, React.js, Node.js, PostgreSQL, MongoDB, and Docker**.
- Work on client projects across industries, including **banking, SaaS, travel, administrative automation, Chrome extensions, chatbots, and internal platforms**.
- Design and implementation of backend and frontend features aimed at improving operational processes, traceability, user experience, and product scalability.
- Building and integrating **REST APIs**, admin modules, forms, responsive views, authentication, permissions, and role-based access control.
- Integration with third-party services, payment gateways, webhooks, APIs, and asynchronous processing systems.
- Production bug fixing, debugging, refactoring, query optimization, and performance improvements.
- Development and maintenance of **unit, integration, and end-to-end tests**.
- Involvement in technical analysis, planning, code review, testing, and ongoing maintenance of production applications.

- Daily use of **Claude Code** and **GitHub Copilot** for technical analysis, implementation, debugging, refactoring, test generation, and documentation, manually reviewing and validating generated code.
- Additional experience using **OpenCode**, **OpenAI Codex**, and **Gemini** as development assistants and to explore technical alternatives.

RAG-based Conversational Platform — *Full Stack Developer*

Sep 2026 – Present | Cooperativa de Trabajo Devecoop Ltda.

Stack: Python · FastAPI · RAG · Vector Search · Embeddings · LLM Integration

- Involved in designing and building a **Retrieval-Augmented Generation (RAG)** architecture from scratch, integrated with a conversational interface.
- The solution combines document retrieval, vector search, *embeddings*, contextual information retrieval, and LLM-based answer generation.
- Contributed to the initial architecture, the **FastAPI** backend implementation, the data-retrieval strategy, and vector storage.
- Took part in LLM integration and in the technical decisions required to take the solution to production.

Banking Platform (Tenders and Procurement) — *Full Stack Developer*

Apr 2026 – Sep 2026 | Cooperativa de Trabajo Devecoop Ltda.

Stack: Python · Django REST Framework · PostgreSQL

- Took part in implementing a system to digitize, automate, and centrally control a bank's internal tenders and procurement.
- Implemented backend business logic to manage purchase requests, suppliers, budgets, and multi-level approval workflows.
- Built web views optimized for the daily work of operations and administrative teams.
- Configured authentication schemes, user roles, and advanced permissions to audit the full history of each purchasing process.
- Wrote unit and end-to-end tests, and optimized database queries to improve response times.

WhatsApp Bot — *Full Stack Developer*

Mar 2026 | Cooperativa de Trabajo Devecoop Ltda.

Stack: Python · Django · WhatsApp Business API · Celery · Redis · PostgreSQL

- Took part in building a conversational platform integrated with the **WhatsApp Business API**.
- Implemented business logic for participant management, data validation, and state-based conversation flow control.
- Built interaction flows and event processing.
- Implemented asynchronous processing with **Celery and Redis**.
- Designed logic for registrations, prize draws, validations, and data persistence.
- Managed persistence in PostgreSQL and cached conversation-context storage.

Banking Platform — *Full Stack Developer*

Oct 2025 – Feb 2026 | Cooperativa de Trabajo Devecoop Ltda.

Stack: Python · Django · PostgreSQL · HTMX

- Took part in developing an internal **scoring and risk management** module for customer evaluation.
- Built backend and frontend features for customer management, account regularization, and internal administration.
- Implemented business logic with **Python and Django**.
- Built and refined views, templates, forms, and responsive screens.
- Implemented **authentication, permissions, and role-based access control**.
- Worked on data validation and process traceability.
- Handled bug fixes, functional improvements, unit tests, and end-to-end tests.

SalesQL — *Full Stack Developer*

May 2020 – Oct 2025 | Cooperativa de Trabajo Devecoop Ltda.

Stack: Vue.js · JavaScript · Python · Django · PostgreSQL · Docker · Stripe

- Designed and shipped new features for a Chrome extension and SaaS platform for finding and extracting emails from LinkedIn, used by **thousands of users**.
- Worked on both frontend and backend, maintaining and evolving critical product features.
- Integrated **Stripe** as the payment gateway, including subscriptions, webhooks, and reconciliation processes.
- Improved load and response times through refactoring and query improvements.
- Debugged and fixed issues in a long-running production system.
- Took part in the frontend migration and modernization.
- Improved stability, maintainability, performance, and user experience.

Deportify — *Mobile Developer*

May 2020 – Sep 2020 | Argentina

Stack: React Native · JavaScript · Android

- Built a mobile app to simplify booking football, tennis, and padel courts.
- Built the main interfaces and flows using **React Native for Android**.
- Took part in the product's initial development, functional validation, and user experience improvements.
- Collaborated on defining and implementing booking flows and mobile navigation.

FreePreTrip — *Full Stack Developer*

Nov 2019 – May 2020 | Cooperativa de Trabajo Devecoop Ltda.

Stack: React.js · Python · Django · PostgreSQL

- Took part in building a PWA to digitize pre-trip inspections for school buses.

- Built responsive interfaces using **React.js**.
- Implemented and tested new backend features.
- Worked on integration between frontend, backend, and database.
- Involved in functional analysis, implementation, and testing.

CoopApp — *Full Stack Developer*

Aug 2019 – Nov 2019 | Cooperativa de Trabajo Devcoop Ltda.

Stack: React.js · Python · Django · PostgreSQL

- Took part in building a web application to simplify and automate administrative processes for cooperatives.
- Created new screens and backend features.
- Implemented operational workflows to automate administrative tasks.
- Involved in functional analysis, implementation, and testing.

Betterez — *Full Stack Developer*

Feb 2018 – Aug 2019 | Cooperativa de Trabajo Devcoop Ltda.

Stack: Node.js · Vue.js · JavaScript · MongoDB · AWS

- Took part in building an international platform for bus ticket booking and issuing.
- Built and tested new frontend and backend features.
- Wrote unit and integration tests.
- Worked on performance optimization and legacy code refactoring.
- Collaborated on database migrations.
- Worked with **Amazon Web Services** services and infrastructure.

Secretaría de Asuntos Docentes — *Professional Internship*

Feb 2016 – Dec 2016 | Quilmes, Avellaneda and Berazategui

Stack: AngularJS · JavaScript · HTML5 · CSS3 · Bootstrap · PHP · PostgreSQL

- Built new features and an admin panel for a frequently asked questions system.
- Took part in the analysis, implementation, and maintenance of web features.
- Worked on frontend, backend integration, and data persistence.

ARTIFICIAL INTELLIGENCE PROJECTS

AI Marketing Content Generator — *Independent project*

Python · OpenAI API · Pydantic · Pillow · Generative AI · Prompt Engineering

- Built a Python solution integrated with the **OpenAI API** for automated content generation.
- Designed and tuned **prompts** to get consistent responses adapted to business rules.
- Implemented structured response validation with **Pydantic**.
- Added fallback mechanisms, error handling, and validation for invalid API responses.
- Implemented metadata and traceability to make debugging and result analysis easier.
- Separated visual generation from data logic to keep results controllable and consistent.
- Wrote tests to validate the behavior of the main components.
- Used **AI-assisted development** tools throughout implementation, debugging, testing, and refactoring.

EDUCATION

Universidad Nacional Arturo Jauretche

Computer Engineering

2017 – Sep 2025

Coursework in software architecture, databases, networking, cybersecurity, Artificial Intelligence, project management, agile methodologies, and information systems lifecycle.

Escuela de Educación Secundaria Técnica N° 4 “Prof. Ricardo A. López”

Programming Technician

2009 – 2016

LANGUAGES

- **Spanish:** Native
- **English:** Intermediate (B1) — technical reading, documentation, written communication, and technical conversation at work
